

SUBSTANCE ABUSE TREATMENT FACT SHEET

Massachusetts Department of Public Health, Bureau of Substance Abuse Services

February, 2002

This fact sheet contains information about the impact of alcohol and other drug use in the First Plymouth and Bristol Senatorial District. Admission data were reported to the Bureau of Substance Abuse Services (BSAS) Substance Abuse Management Information System in FY 2001.

Residents of First Plymouth and Bristol Senatorial District

Treatment Admissions:

In FY 2001, there were 120,687 admissions to licensed substance abuse treatment services in all of Massachusetts. Of these, 1.9% (2,290) reside in the First Plymouth and Bristol Senatorial District. Due to budget cuts in FY 2002, BSAS estimates that 19% (435) of First Plymouth and Bristol Senatorial District residents will not be able to access treatment services. **Please note that these statistics represent only individual admissions, and represent a figure lower than the actual number of constituents in need of treatment services.**

- In FY 2001, 74.7% of admissions from the First Plymouth and Bristol Senatorial District were male and 25.3% were female.
- Over 62.9% of admissions were between the ages of 21-39.
- 87.3% of admissions were white non-Latino, 4.4% were black non-Latino, 5.2% were Latino, 0.1% were Asians, and 2.9% were other racial categories.
- 57.9% of those admitted to treatment were never married, 19.9% were married, and 16.9% reported not to be married now.
- 26.2% of admissions had less than high school education, 53.5% completed high school, and 20.3% had more than high school education.
- 39.6% of those admitted to treatment were employed.
- 6.5% of those admitted were homeless.
- 9.5% of admissions had prior mental health treatment.

Substances Used in Past Year:

Upon entering treatment, each client is asked to report ALL substances used in the past year (12 months) prior to admission. Admissions frequently report using more than one substance within the year. The use of more than one psychoactive substance, such as alcohol and marijuana, is referred to as 'polydrug' or 'polysubstance' use. For example, individuals who use cocaine, crack and heroin also may report the use of either alcohol and/or marijuana.

- Table 1 shows ALL substances which clients reported using in the year prior to admission, including the prevalence of injection drug use (IDU) in the First Plymouth and Bristol Senatorial District. Injection drug users (or IDU's) are individuals who use a needle to ingest cocaine, crack, heroin or another drug to get high.

Table 1 Annual Admissions by Substance Used FY 1995 – FY 2001							
First Plymouth and Bristol Senatorial District							
	Total	Alcohol	Marijuana	Cocaine	Crack	Heroin	IDU
FY '95	1,632	1,353	478	494	212	470	298
FY '96	1,674	1,395	542	456	232	453	329
FY '97	1,906	1,557	556	454	261	512	385
FY '98	2,229	1,743	649	517	198	674	465
FY '99	2,211	1,690	717	583	238	766	513
FY '00	2,098	1,561	683	610	241	717	480
FY '01	2,290	1,707	669	598	214	837	558

- Since FY 1995, residents of First Plymouth and Bristol Senatorial District reported a continuous rise in alcohol and heroin use, while marijuana, cocaine, and crack use remained fairly steady.

Heroin and Injection Drug Use:

Figure 1 below shows the proportional increases in all admissions in the First Plymouth and Bristol Senatorial District and the proportional increase in admissions reporting heroin and injection drug use, a factor driving increases in HIV¹.

- Total treatment admission for all modalities rose 40% between FY 1995 and FY 2001. During the same period, admissions for heroin and injection drug use treatment increased 82%.

Primary Substance of Use:

At admission clients also identify a “primary drug” of use which is the substance currently causing them the most problems.

- Table 2 compares the proportional distribution of primary drugs in Massachusetts with that for the First Plymouth and Bristol Senatorial District.

Table 2					
Primary Drug by District and State FY 2001					
	Alcohol	Heroin	Marijuana	Cocaine	Crack
District	54.9%	32.4%	3.5%	3.9%	1.7%
State	46.5%	35.9%	6.5%	3.9%	3.4%

- While heroin, marijuana, and crack as a primary drug of use in your Senatorial District was lower than the State average, alcohol as a primary drug was higher within your District.
